(a) Exact Gaussian Doob control
absolute mean error
absolute variance error
$w^* \approx 1.95$
ESS/$N = 1$ at every w
absolute target-moment error
guidance w
(b) GMM: kernel discrepancy
biased MMD^2
$w = 2$
$w = 3$
(c) GMM: sliced Wasserstein
naive
terminal IS
exact Doob
approx. Doob IS ($\rho = 0.8$)
sliced W_1
$w = 2$
$w = 3$
